

TrustWorks360 Overview

TrustWorks360, a subsidiary of IIS Partners, is an Australian based global company bringing innovative, and leading technology solutions to the Asia Pacific region. TrustWorks360 represents leading solutions to solve current and emerging business, privacy and security problems, from Australia, New Zealand, Canada, Israel, Europe, and the USA.

The landscape is changing with laws, obligations, regulations and community expectations of organisations to protect personal information and sensitive data is growing and will continue to grow. Compliance and good practice are increasingly difficult and expensive to manage without automated solutions.

Technology and tools, particularly PETs (Privacy Enhancing Technologies) are a rapidly growing solution area with new capabilities being developed in response to the increasing demand globally.

Australian organisations can benefit from the use of these emerging technologies developed to meet the needs of organisations in geographies with the sort of obligations with which Australian organisations will be required to comply.

Our Partners

We partner with innovative technology vendors that we believe solve significant privacy and security compliance problems. We act as a local reseller and provide implementation and support services to ensure the solutions deliver value to clients.

Partner	Business Problem	Offering(s)
One Trust www.onetrust.com	Obligations in privacy, security and data protection are becoming stronger and more complex both locally and globally. It's becoming increasingly difficult for organisations to maintain compliance in an efficient and effective way.	The One Trust platform enables business to gain visibility, create actionable insights, and deliver automation across privacy and data discovery, GRC, ethics, and ESG. It is a comprehensive privacy, risk and ESG platform supporting with products including: <ul style="list-style-type: none">• Privacy Program Mgt.• GRC including Third Party Risk Mgt.• Data Discovery, Mapping and Governance
Securiti www.securiti.ai	In order to protect data organisations must be aware of exactly what data they have, where its stored, if they should keep it and if its adequately protected. Data Governance is a basic requirement for good business practice and to comply with privacy obligations, yet many large organisations don't practice good data governance.	Enable enterprises to safely harness the incredible power of data and the cloud by controlling the complex security, compliance and privacy risks through a suite of products that discover the data held and apply governance controls to meet obligations.

Partner	Business Problem	Offering(s)
QPrivacy www.qprivacy.com	Organisations utilise many 3 rd party tools on websites and mobile apps to improve customer experience or sales/marketing outcomes (e.g., Google Analytics, Adobe, Intercom). These tools often send that data to their servers or sell it to their customers. This can be a breach of privacy laws, privacy policy, cross boarder data transfers and commercially sensible practices.	QP Audit – identifies the actual data flowing to each third party to determine if there is an issue to be remediated. QP Rules – Configurable protection against data leakage by controlling what data flows to which third parties and what is blocked, encrypted or tokenised.
Prighter www.prighter.com	A local privacy representative is required in many geographies to comply with privacy laws or regulations. It is also a requirement in many geographies that, in the event of a breach, a series of time bound communications be made to a range of regulators or government authorities. Complying with both can be expensive and time consuming.	Privacy Representation aaS – local privacy representation via Prighter or one of their partner law firm who as act your local representative. Data Breach Management tool – risk assessment and configured response requirements for a breach Prighter DSR – manages the flow and completion of Data Subject Right requests (where required)
Global Radar www.globalradar.com	Compliance with AML/CTF laws around the globe is a complex and expensive task, and if not done correctly can result in enormous fines. If not streamlined can The ability to identify the ultimate beneficial owner (UBO) can be com	The solution provides an integrated AML/CTF platform that includes Know Your Customer (including Ultimate Beneficial Owner), transaction monitoring linked to KYC enabling Suspicious Matter Reporting and a centralised workflow & management platform to track actions and maintain compliance.
ID Verse (Previously OCR Labs) https://idverse.com	Identifying and re-authenticating customers can be a slow and expensive process if not done well can have serious consequences. Additionally holding personal ID documents increases the risk of a data breach.	Digital identification and biometric identification services using facial recognition and document verification ML models increasing the speed and accuracy of verification while reducing the need to hold ID documents, and therefore risk of a data breach.
